

It's safe

The Maxxthor Mosquito Protection Zone is low irritant and low allergenic. Its formula has been sensitively developed with upmost care to affect mosquitos and annoying biting insects not humans or pets.

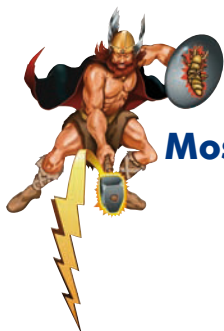

It's long lasting

A single Maxxthor Mosquito Protection Zone treatment continuously keeps working for up to eight weeks, protecting you and your family regardless of weather conditions such as rainstorms and blazing summer heat. It simply remains effective for longer. There is no better mosquito protection solution.

Maxxthor Mosquito Protection ZONE

Mosquito Protection**

**Freedom
from mosquitos and
other biting insects**

It's fantastic

At last! – No more mosquitos and other biting insects. And no more expense from inadequate aerosols, and insect lights.

Diseases such as malaria, Ross River virus, Barmah Forest virus, Sinbis virus, Kunjun virus, Murray Valley encephalitis and dengue fever are a constant threat. Maxxthor Mosquito Protection Zone is the one simple, professional solution that protects all outside entertaining and dining areas, backyards, park and outdoor recreational spaces safely and effectively.

Whilst mosquito larvae mature in water, the biting and blood sucking adults rest in vegetation and shade. The Maxxthor Mosquito Protection Zone is professionally applied to these daytime resting places and provides greater than 90% reduction in mosquito and other biting insect numbers. The Maxxthor Mosquito Protection Zone is not repellent to adult mosquitos, so they rest undisturbed on the treated surfaces ensuring greater uptake of the active ingredient.

It's friendly to your environment

Plants are not affected and continue to thrive after application. In fact the active ingredient used in the Maxxthor Mosquito Protection Zone is approved for use on food crops. Application is odourless and invisible to the naked eye.
