

# PERSECT 25%WP

(SINNEAI-WePD/104/0773)

## Permethrin 25%WP

### Formulation: Wettable Powder

**Persect 25%WP** belongs to the synthetic pyrethroids group, which controls a wide range of public health insects.

**Persect 25%WP** is effective to control flying and crawling insects found in gardens and houses such as cockroaches, ants, bedbugs, etc. It is a broad-spectrum insecticide offering rapid knockdown and long residual activity, swift killing action to insects and low toxicity to mammals.

**Type of pest control:** Cockroaches, ants, bedbugs and others crawling and flying insects.

**Mode of action:** Non-systemic insecticide with contact and stomach action. It gives rapid knockdown and long residual activity.

Type of Spraying	Application Rate
- Surface Treatment	- Dilute 25gm of <b>Persect 25%WP</b> with 5Litre of water, for control of crawling insects such as Bugs, cockroaches, ants, apply 1Litre of diluted spray solution /15-20 m <sup>2</sup> .

When **Persect 25%WP** solution is sprayed on the surface, 100% of the active ingredients are left on the surface. This feature provides a faster knock-down of insects and other pests.

**Persect 25%WP** formulation also gives a 90 day (or better) residual.

It can be used to solve mild to **severe ants** control problem. It also has a faster knock-down and is better for killing **spiders** and other hard to kill pests. This low odour insecticide is a favourite with professionals and homeowners for general purpose pest control as well as **termite control**.

The main disadvantage of a Wettable powder: the finished solution can leave a visible residue on dark surfaces, (Visible residue is not to be confused with staining) can be wipe off easily.
